Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I am overwhelmed managing multiple loans and repayments. • I don't have a clear picture of my overall financial health. • I need help finding the most realistic settlement option for each loan.	PERSONA NAME <i>(Role / User Type)</i> Borrower / Debt Manager	THINKS • How can I reduce my overall debt burden? • What is the best repayment or settlement strategy for me? • Will I actually be able to become debt-free?
DOES • Adds and tracks all loans in one place. • Checks financial health dashboard regularly. • Requests AI settlement predictions and negotiation strategies.		FEELS • Stressed and anxious about outstanding debt. • Confused by complex financial calculations and terms. • Hopeful when guided with clear, personalized strategy.
